PROJECT SYNOPSIS

Project Title:

Edugion Job Portal

Candidates:

- Sunjit Dhillon, MS CS Align Student, Northeastern University, Boston.

- Shuaizhen Li, MS CS Student, Northeastern University, Seattle.

About the Problem:

What aspects of a candidate do traditional resumes and cover letters fail to address?, what venue might demonstrate them more effectively?, and how can a portal be made that is both aesthetically appealing and functional? The team of students will assist in researching and choosing the specific application components that the portal will ask for, and will then incorporate those materials into the portal build for the company website. We participated in every step of the process through research, development, design, and creation of the company's dream job portal.

Why We Chose It:

- To create a job portal which is both appealing and functional.

- To provide candidates a platform which is easier to use, more functional and more efficient.

- To provide recruiters a platform which is easier to navigate and more efficient to hire.

- To provide cross-culture/country hiring/job-seeking experience.

Main Objective:

Goals:

- To create a visually appealing, secure and innovative job portal that is easy to navigate and has an easy hiring process.

- The portal must address additional aspects of a candidate on top of conventional resumes and cover letters.

- The portal design must not just be limited to a particular country or a specific section of job-seekers, rather it should take into account the requirements of job seekers from a global perspective.

- Innovative features must be added to the portal to make it stand out from the current job portals in the market.

Platform used:

- Webflow was used for designing pages for the job portal.

Influences:

Many features are made to adapt and make it easier to use for people from all over the world. The job portal can be competitive in recruiting sites on a global scope. Meanwhile, different types of medias are introduced in the system to showcase candidates. In this case, the site can be attracted to more recruiters and candidates.

Conclusion:

Edugion job portal is a job portal with unique, innovative features.

It Enables job seekers to easily navigate and search for their dream jobs, connect with employers, recruiters and receive updates about job postings.

It Ensures a smooth hiring process for the recruiters and employers.

The traditional resumes, cover letters and online forms make the job application process much impersonal and disconnected from individuals. Through this job portal, the candidates can also express their relevant skills set through video resumes and sharing their social media profiles.

Allows the recruiters/employers to know more about the candidate, their interests, hobbies, soft skills and other relevant skills/traits which the candidate wishes to highlight.

The portal features/parameters are not limited to a particular country or a specific section of job-seekers, rather it takes into account the requirements of job seekers from a global perspective.
